

Dear Fisherman,

Thank you for purchasing Winco's Custom lures products. Quality plastics, components, design and innovative changes enable our products perform with outstanding results.

1- Scent and salt are mixed into the plastic before pouring. Neither product will wash off with repeated use. No additional added scent is recommended.

2- Rig all stick worms along the seem to ensure the fully-rounded worm hangs and falls horizontally. The worm will "shimmy" from side to side with that enticing "tail-wiggle" on the drop.

3- Mustad Ultra-point/Gamakatsu hooks are recommended for use when rigging all Winco's soft baits

4- Winco's soft baits sink without any additional weight being added (except specific floating models)

5- All "Wacky" worms come with a tight band or an (o) ring around the center of the worm. Rig the hook through the center of the worm, under the band, and exposed on the other side. **Mustad Ultra-point/Gamakatsu octopus circle hooks are recommended.** The Weedless Wonder and the new dual-wire, weight wacky worm hook compliment the use of the wacky worm with excellent snag free performance in shallow and deeper water.

6- Mustad Ultra-lock hooks are recommended for use w/4 1/4" Stick Worm Jr.s , 5 1/4"Magnum Stick worms and 6" & 7 1/4" Predator Swim'n Worms. They hold the worm firmly in place when casting. A dab of "Lock Tight" –**super glue gel** applied below the line tie eye of the hook will hold the bait securely for all extreme "skip-casting" situations. Dip the worm in water and wait 20 seconds before casting so the glue has time to set-up. Hardened super glue will build up on your hooks and is easily removed by soaking your used hooks in a closed, glass container of acetone. The product MEND-IT will successfully repair all of your split/torn swim-baits and soft plastics.

7- Our products have been thoroughly tested and used with outstanding results throughout the United States of America, Canada and Mexico
